

# **COREflex® - Spinning Soft Core Yarn on Ring and Compact Spinning Machines**

**COREflex®** is the new SUESSEN Core Yarn Attachment for any ring spinning machine...

**COREflex®** is a reliable and cost-effective solution and meets all requirements of any quality spinner, be it in the conventional and/or compact ring spinning department.

The new design follows stringently the Requirement Specifications provided by our customers.

The attachment works completely independently from the top weighting arm and guarantees simultaneous and jerk-free movement of the traverse motion of fibre strand and filament. The filament feed roller is independently adjustable in two planes and does not touch the front top roller.

Setting of tension draft and traverse motion for **COREflex®** is made at a central control panel.
