

HP Drafting Systems

The Modernization System for Ring Spinning and Roving Frames

The HP ComponentSet comprises HP Top Weighting Arms, roller stands, HP Bottom Rollers with bearings, HP Top Rollers with cots, bottom apron guide bars, HP Stability Cradles with cradle spacers and aprons etc. These modernization components are available for any brand or type of ring spinning frame as well as roving frame.

The HP Spinning Components and Parts are also available separately.

Likewise, SUESSEN's **HP-GX 4010 Top Weighting Arm** for roving frames has also been hugely successful. Again, the enhanced quality this provides has been the decisive factor for our customers.

Also available is SUESSEN's **HP-GX 5010 Top Weighting Arm** for long-staple (worsted) spinning.
